Shaver-Blades

Instructions for use

GENERAL INFORMATION

Please read these instructions before using the surgical instruments. Improper and/or incorrect handling may result in damage to the surgical instruments. You are advised to wear personal protective clothing and gloves when handling surgical instruments. In case of accidental contact with the surgical instruments, wash your hands immediately.

ATTENTION

The following must be observed for VOMED® Shaver-Blades.

1. The blades must not be used for any other surgical instruments.
2. The outer tube is not compatible with other manufacturers.
3. The blades must not be used in the wrong position or at the wrong angle.
4. The blades must be disposed of immediately after use. They must not be re-used.
5. The blades must not be stored in a humid environment.

SAFETY AND RISks

Shaver-Blades may cause injuries if used incorrectly. For this reason, all instructions must be observed. Improper use may cause far-reaching consequences for the patient and/or the medical device. Shaver-Blades must not be used any more and immediately replaced in the event of damage. If the above-described chemical products are used, it is imperative to observe the manufacturer’s instructions for use. The user is responsible for the correct handling, improper use, failure to observe the intended use and application thereof. VOMED will assume no liability for any loss in contemplation of this possibility.

PROCEDURE FOR MECHANICAL CLEANING

1. Preparation at the place of use: immediately before or after every use, the inner and outer tubes with the same number may be assembled on of the inner tube and the corresponding outer tube. Only then may they be disassembled for reprocessing.
2. Preparation for decontamination: immediately before or after every use. The inner and outer tubes with the same number may be assembled on of the inner tube and the corresponding outer tube. Only then may they be disassembled for reprocessing.
3. Rack disassembled instruments in a minimally invasive surgery trolley. Place instruments that cannot be racked in an appropriate container until initial sterilisation in order to avoid damage. Drying and disinfection must be performed immediately after reprocessing.
4. Draining: air must be removed from the surgical instruments. A drainage channel open at the top must be used. The inner and outer tubes must be disassembled and cleaned immediately before disassembly.
5. Drying: Drying of the exterior surface of the instruments through the advice of the surgical doctor. If needed, additional manual drying can be performed by means of a air blower. Drying may only be performed on sterile instruments.
6. Storage: Storage of the sterilised instruments and component parts is only allowed in a dry, clean and dust-free environment at maximum temperature of 5°C to 15°C.

INDICATION

Shaver-Blades are compatible with Linvatec and commercially available and approved instrument oil.

CONTRAINDICATION

No specific contraindication is known. If the reprocessing information described herein are observed, the medical devices can be used for the intended purpose.
